

# FARNAX®-CLEAN

# Surface cleaning into the deepest pores

- Active, long-lasting foam
  - Extreme dirt penetrating capacity
  - Very economical use
  - Safe on all farm equipment and surfaces

HYGIENE IS IN OUR GENES

## WHY CLEANING WITH FARNAX®-CLEAN?

Bacteria, which are covered by biofilm and dirt, cannot be eradicated by a disinfectant.

The purpose of cleaning is to remove dirt and the sticky biofilm (= a combination of faeces, grease, proteins, mineral deposits,...), which protect the microorganisms. This step is essential to assure an efficient disinfection afterwards. Only a professional cleaning detergent with strong foaming and dirt-penetration capacity will remove the resistant biofilm.

Farnax®-Clean is a professional detergent, designed to remove heavy dirt and biofilm on different surface types and materials used in farms and hatcheries.

## DIRT PENETRATING FOAM

Obtain optimal results with **Farnax®-Clean** by using a foaming lance. The foaming lance, connected with a high-pressure machine mixes the concentrated **Farnax®-Clean** with water and air. This balanced mixing transforms the solution into a sticky, strong foam with maximum contact on the dirty surface.

This foam has several advantages:

- **Adherence**, which increases contact time and so increases effectiveness
- **Penetration** through the fatty, protein containing biofilm and other hard dirt layers
- **Economic in use**: less time and less water needed to obtain a better result

## SAVING TIME AND ENERGY

Thanks to the use of **Farnax®-Clean** the cleaning time and water consumption decrease obviously. A saving in cleaning time up to 50% is possible. In the speed-test (= 15 minutes contact time), **Farnax®-Clean** (2% dilution) had a superior dirt-solving activity, compared to traditional foaming products used at a concentration of at least 5%. The low dosage needed with **Farnax®-Clean** to have a good sticking capacity and dirt solving activity, makes it a very cost effective product in use

## SAFE IN USE

**Farnax®-Clean** has been tested on different types of surfaces in farms and hatcheries and guarantees you a life time warranty on your equipment!

## APPLICATION

1. Remove dirt (dry cleaning or with high pressure machine)
2. Apply Farnax®-Clean with a foam lance
3. Dilute at 0,5-2% (= automatic in foaming lance)
4. Let penetrate – respect contact time: 30-60 minutes
5. Rinse thoroughly with high or medium pressure
